

Customer: AIRCARGO TRANSPORT GMBH

Air freight monitored through WEBFLEET

The Company

Rotra Speditions GmbH was founded in 1978. In December 1998 this successful company was renamed to the current name of AIRCARGO TRANSPORT GmbH. The company has its head office in Emmerich am Rhein and employs 22 staff. AIRCARGO TRANSPORT GmbH transports time-critical air freight throughout Europe for airlines and integrators with roller floor vehicles.

The Assignment

With a new system, communication costs should be reduced and communications and planning should be improved. In addition, the possible inclusion of working hour monitoring and logbook functionality within the system could increase the efficiency of the fleet.

The Solution

The solution offered by TomTom WORK meets all the requirements of AIRCARGO TRANSPORT GmbH. After the introduction of WEBFLEET and the installation of vehicle terminals into the entire vehicle fleet, AIRCARGO TRANSPORT GMBH was able to reduce its telephone costs by about 40%. This was achieved through the successful use of the order transmission facility of WEBFLEET directly to the vehicle terminal. In addition, the planning could be significantly improved thanks to the ability of the vehicle. It is also possible for the company to offer an additional service, because with WEBFLEET, customers can now follow the transportation of their goods on the screen through the Homepage of AIRCARGO TRANSPORT GmbH.

Vehicle fleet: 450 trucks

TomTom WORK
