

Customer: André Voß Erdbau & Transport GmbH

Coil – Unit freight – Bulk freight transport

The Company

André Voß Erdbau & Transport GmbH is active in transportation and logistics in Germany and throughout Europe. With coil, paper and bulk freight transport, André Voß GmbH serves nearly every corner of the European Union. A modern, as good as new fleet and experienced personnel are available for carrying out the transportation.

The Assignment

For enabling real-time planning, to receive the current vehicle location data and ultimately to minimise the communication costs, André Voß GmbH approached TomTom WORK. These essential requirements for a problem-free and modern method of fleet deployment will now be enabled and optimised with TomTom WORK.

The Solution

The solution offered by TomTom WORK is WEBFLEET in combination with eight blackbox telematics units. Because WEBFLEET is an Internet-based fleet management system, it will be possible for the André Voß GmbH to determine the locations of the vehicles at any time and from anywhere. This also enables a problem-free flow of information between the planners and customers.

Furthermore, through the “optimal fleet overview“ communication costs are reduced because time-consuming and costly follow-up calls by telephone are not necessary. At the end of the month, WEBFLEET is also especially helpful thanks to its evaluation functions, such as single-trip data and the logbook for making calculations.

Voß Gruppe

Vehicle fleet: 27 trucks

TomTom WORK
Fleet management

- Minimising communication costs
- Current vehicle location information
