

Customer: IN TIME Transportgesellschaft mbH

Express shipments - In Time

The Company

Founded in 1986 at the Maschener Kreuz motorway junction, IN TIME Transportgesellschaft mbH today employs about 70 staff and has a fleet of more than 40 trucks. With rapid and reliable deliveries throughout the whole of Europe, comprehensive transport and logistics solutions, major warehouse and commissioning areas in the outskirts of Hamburg and a competent service, IN TIME has been operating successfully for a long time.

The Assignment

To gain flexibility and reduce costs through navigation and localisation of their vehicles, IN TIME was looking for a reliable and proven telematics system with good service support. It should be possible to monitor routes and especially driving times, communication expenses should be reduced and the work should be made easier.

The Solution

IN TIME has been using WEBFLEET since January 2005. The complete fleet was equipped with the TomTom WORK telematics and navigation solution. With the WEBFLEET.connect data interface, IN TIME can import the data necessary into the internal communication and billing processes. Using the TomTom WORK system, the IN TIME vehicles are localised and navigated to their destinations. In addition, telephone calls are clearly reduced as orders are sent as text messages, enabling savings on communication expenses. IN TIME uses the WEBFLEET reporting functions very intensively for accounting, for freeing up specialist personnel, for despatching and for accounting. "I am extremely pleased with the performance of WEBFLEET and of TomTom WORK, for example the free training of our staff." (says Markus Kögler, EDV manager at IN TIME)

Vehicle fleet: 40 trucks

TomTom WORK
Fleet management

- Lower communication costs
- Route and travelling time controls
- Vehicle navigation
- Reduction of work
- Commercial journey analysis
- Shipment monitoring online also at customer sites
