

Customer: Reichhart special cargo & services GmbH & Co. KG

Airbus on the road

The Company

Reichhart special cargo & services GmbH & Co. KG is a transport company from Gilching. Reichhart has about 400 employees and a vehicle fleet of: 200 trucks/cab units, 20 cars, 40 bulk carriers, 100 trailers/trailer units and 130 containers.

The Assignment

Localisation of both national and international special transports – EADS (European Aeronautic Defence and Space Company) in Augsburg, which commissions Reichard to transport major aircraft components from Augsburg to Manching, but also to Turin (I), Warton (GB) and Madrid (E) wants to make it possible to monitor these special transports.

The Solution

The TomTom WORK fleet management solution therefore is used on account of its accuracy and easy application. This enables EADS to monitor its shipments via Reichhart at any time. EADS has access to the localisation and with this to WEBFLEET.

Since 2000, Reichhart has also used WEBFLEET for other special transports, such as the transportation of Airbus parts. This involves transportation on European roads (Belgium, France, England and Italy), which also means special coordination and communication expenses which are now dealt with by Reichhart itself.

Vehicle fleet: 200 trucks

TomTom WORK
Fleet management

- Monitoring of national and international special transports
- Access to location data at any time by customers
- Monitoring of individual shipments on the transport (also international)
- Optimisation of the work process and time planning
